## Was your child born preterm?

Does your child have trouble learning motor skills, such as printing or riding a bicycle?

[https://www.astro.org/uploadedImages/Main\\_Site/News\\_and\\_Media/News\\_Releases/2013/abstract\\_10\\_215x245.jpg](https://www.astro.org/uploadedImages/Main_Site/News_and_Media/News_Releases/2013/abstract_10_215x245.jpg)

We are seeking children who were born very preterm (less than 32 weeks gestation) with developmental coordination disorder (DCD) or suspected DCD (8-12 years old) to participate in a magnetic resonance imaging study to compare brain structure and function before and after intervention.

Your child will receive 12 weeks of occupational therapy to work on child-specific motor goals.

Version 2: 24-Aug-20
