

Does your child have difficulty with motor skills?

Does your child require Occupational Therapy (OT) assessment for DCD?

We are **Joining Up** Motor assessments and **Pediatricians** **JUMP for DCD Study**

PRINCIPAL INVESTIGATOR:

Jill G. Zwicker, PhD, OT

Associate Professor, UBC Department of Occupational Science & Occupational Therapy

Associate Member, UBC Department of Pediatrics (Division of Developmental Pediatrics)

Investigator, BC Children's Hospital Research Institute

Clinician Scientist, Sunny Hill Health Centre at BC Children's Hospital

What are the aims of the study?

1) to learn how OT assessment for DCD can help pediatricians diagnose children with DCD; and
2) to build our database on children with DCD and how best to help them.

Who can participate?

Families of children 3-16 years old who have been referred by their pediatrician.

RESEARCH AREA:

Developmental Coordination Disorder (DCD)

What's involved?

One 2-hour visit at BC Children's Hospital for an OT assessment and parent/guardian to complete questionnaires. OT report to be sent to families and the pediatrician. Study team to be informed by pediatrician of DCD diagnosis and parent to complete final short survey.

sara.leckie@cw.bc.ca

What are the benefits of participating?

Participating in the study may help the child's pediatrician confirm or rule out a DCD diagnosis. Families may be invited to participate in other DCD research and intervention studies.
