

Is your child **8-11 years** old?

Do they have motor difficulties or are they diagnosed with Developmental Coordination Disorder (DCD)?

If so, take part in our study that...

- ✿ aims to identify brain differences in children with DCD
- ✿ uses non-invasive **Magnetic Resonance Imaging (MRI)** to take a picture of your child's brain while watching a movie

What is involved?

- ✿ Completing questionnaires
- ✿ 1 mock MRI session
- ✿ 1 MRI scan session
- ✿ Children will receive a picture of their brain and a \$25 gift card

Who can join the study?

- Children age 8-11 years
- Diagnosis of DCD or motor difficulties, e.g., riding a bike, using cutlery, printing, playing sports

For more information on joining the study, please contact:
