

Is your child 3-5 years old?

Do they have trouble learning motor tasks or are they suspected to have Developmental Coordination Disorder (DCD)?

If so, take part in our study that...

- ✿ tests **Occupational Therapy (OT)** for young children with DCD that is usually used for older children with DCD
- ✿ uses non-invasive **Magnetic Resonance Imaging (MRI)** to take a picture of your child's brain while they watch a movie

What is involved?

- ✿ Completing questionnaires
- ✿ 1 mock MRI session
- ✿ 2 MRI scan sessions
- ✿ 10 weeks of **free** OT to work on child specific motor goals

Information form:
<https://redcap.link/l834qqlg>

Who can join the study?

- > Children age 3-5 years
- > Diagnosed/suspected DCD or difficulties learning motor-based tasks e.g., throwing/catching, using spoon/fork, colouring, playing on the playground

For more information on joining the study, please contact:
