

# Exhibit 1

## TOPIC: PSYCH

# Exhibit 2: Explaining development of psychiatric illness

# Exhibit 2 cont'd: Explaining development of psychiatric illness

Unaffected

More vulnerable, but not experiencing episode of illness

Experiencing active episode of illness

## Exhibit 2 continued

### My genetic risk score for depression

This is how your genetic risk - according to the variations tested - compares to others' risk from testing the same set of variations

Pie chart representing the information that was provided by your genetic test in relation to *all* of the factors (including genetic & environmental) that can contribute to developing depression

Combined, all of the genetic variations that were tested contribute this much to the total picture of why people develop depression.

Things that can contribute to developing depression that were *not* tested for (including other genetic factors, & experiences).
