

# Caregivers: What Was Inpatient Care Like for Your Non-Speaking Child?

Speech-language pathologists and researchers want to learn from parents and caregivers about how their children communicated with healthcare providers while staying at BC Children's Hospital.

## Who are we looking for?

Caregivers of children who were unable to speak, even for a short period of time, while receiving care on T6, T7, ARU, or PICU.

This includes patients who were intubated, had an acquired injury, or with a developmental disability (including those who use other systems to communicate such as devices or pictures).

## What does participating look like?

Fill in a short online questionnaire to help us get to know you and your family.

Join us for a relaxed, virtual 1 hour meeting to share your experiences and provide suggestions.

## What happens after our meeting?

We will send you a \$50 gift card of your choice to thank you for your time and ideas.
