Help Improve Type 1 Diabetes Care for Children & Youth

We are inviting families to take part in a study to test a new digital platform that helps families and healthcare teams work together to manage type 1 diabetes (T1D) at the BC Children's Hospital Diabetes Clinic.

Who can participate?

Children and youth ages 3-17 years who:

- Have been diagnosed with T1D at least 6 weeks ago
- Use a continuous glucose monitor and either an insulin pump or basal-bolus multiple daily injections
- Are willing to connect their diabetes devices to Glooko

Participation also includes a parent or guardian.

What does participation involve?

- Use the platform during and between clinic visits over a 12-month period
- Complete surveys and interviews about your experience
- Share data from your diabetes devices with your healthcare team
- Receive a gift card as a thank you for your time

Complete a screening survey!

If you have questions or would like more information:
